PL-200: Microsoft Power Platform Functional Consultant
Topics - Course 1 of 2

	Design and manage business solutions
	Identify Microsoft Power Platform components
1	Determine the required Microsoft Power Apps app type for a given business scenario
2	Determine which Microsoft Power Platform components meet a given business scenario
3	Describe business logic in Microsoft Dataverse
4	Describe connectors
5	Describe use cases for cloud flows and desktop flows
6	Describe use cases for AI and Microsoft Copilot in Microsoft Power Platform
7	Describe Microsoft Power Platform environments
8	Describe use cases for Power Automate Process Mining
9	Determine reporting options for given business scenarios including views, Microsoft Power BI visualizations, and dashboards
	Configure and manage Microsoft Dataverse
10	Create tables and table columns based on a data model
11	Link tables by using lookups
12	Configure Dataverse business rules
13	Describe how Dataverse uses role-based access control (RBAC)
14	Add table permissions to existing Dataverse security roles
15	Create tables and table columns by using Copilot in Dataverse
16	Import and export data by using Microsoft Excel
17	Determine when to use Microsoft Dataverse for Teams or Microsoft Dataverse
	Manage Microsoft Power Platform components during development
18	Create a Dataverse solution
19	Export and import a Dataverse solution
20	Export and import a non-solution canvas app or a non-solution cloud flow
21	Add existing components to a Dataverse solution
	Analyze and visualize data
	Create and consume Microsoft Power BI dashboards
22	Create a simple report from an existing dataset by using Power BI Service
23	Create Power BI dashboards from existing reports
24	Embed Power BI dashboards and tiles in canvas apps and model-driven apps
25	Share Power BI dashboards
	Describe AI Builder models
26	Describe use cases for AI Builder
27	Describe the differences between prebuilt models and custom models
28	Describe the process for training custom models
29	Use a model from within Power Automate or Power Apps

	Create business solutions
	Create and manage model-driven apps
30	Create and configure model-driven apps
31	Create and configure Dataverse table forms
32	Create and configure Dataverse table views
33	Share model-driven apps with other users and groups
34	Create and configure model-driven app dashboards
35	Create and configure model-driven app charts
	Create and manage canvas apps
36	Connect to data sources in canvas apps
37	Interpret app checker results
38	Manage versions of canvas apps
39	Publish canvas apps
40	Share canvas apps with other users and groups
41	Add canvas app assets and components
42	Describe modern controls and themes
	Create and manage screens for canvas apps
43	Determine when to use screens, forms, containers, galleries, buttons, labels, input controls, images, charts, and custom controls
44	Configure UI elements
45	Implement Power Fx formulas
46	Implement collections and variables
47	Run a Microsoft Power Automate cloud flow from a canvas app
	Create Power Automate cloud flows
48	Describe types of triggers
49	Configure triggers
50	Configure flow steps
51	Test and troubleshoot a cloud flow
52	Implement conditional logic
53	Create approvals and monitor the approval process by using Power Automate and Microsoft Teams
54	Share cloud flows
